

HEMOCLEANSE

THE MISSING VARIABLE

IN PATIENT RECOVERY

You Already Recognize the Problem

Pattern Recognition

You evaluate symptoms.
You identify patterns.
You consider the possibility the patient's environment may be contributing to illness.

Treatment Planning

You develop a clinical strategy. You assess physiological burden.
You establish a diagnosis and initiate treatment.

Environmental Consideration

You advise your patient to assess for potential exposure to mold or water damage.
They follow through.

Why Progress Stalls

Treatment progresses. But symptoms persist or return. Not because the diagnosis was wrong, but because exposure wasn't fully resolved.

This is where environmental correction often fails clinical care.

Why Environmental Correction Often Fails

#1

Most environmental services focus on effort, not outcome. Mold may be removed. Clearance may be achieved. Yet the underlying drivers of exposure still remain.

#2

Partial removal, poor containment, or unresolved moisture can allow exposure to persist. Remediation may redistribute particles and worsen reactions. The environment appears "handled," but exposure continues.

This is the gap HomeCleanse was designed to close.

The HomeCleanse Difference

HomeCleanse was built specifically to resolve the environmental failures that undermine clinical recovery. Our protocols are structured around one objective: Complete exposure resolution.

Rather than focusing solely on visible mold or clearance metrics, HomeCleanse addresses the underlying drivers and contamination dynamics that determine patient outcomes.

Our Protocols Systematically Address:

- ✓ Root-cause moisture drivers
- ✓ Contamination reservoirs
- ✓ Particle mobilization and redistribution
- ✓ Airflow and pressure dynamics
- ✓ HVAC and systemic cross-contamination

Why Physicians Trust HomeCleanse

HomeCleanse Founder Michael Rubino has specialized in complex mold and contamination cases since 2012.

His work began in the aftermath of Hurricane Sandy, addressing widespread building failures and medically vulnerable populations across the Northeast.

Since then, HomeCleanse has helped thousands of families, physicians, public figures, and organizations nationwide resolve environmental conditions impacting health.

Experience creates predictability.
Predictability creates confidence.

HomeCleanse exists so physicians can focus on patient care with confidence that the environment is no longer undermining recovery.

Designed for Medically Vulnerable Patients

HomeCleanse protocols are adapted for individuals with heightened sensitivities and complex chronic conditions. Processes are precision-controlled, low-residue, and exposure-conscious, utilizing botanical-based products to minimize the risk of physiological disruption.

Environmental correction should help stabilize the patient, not destabilize treatment.

Unmatched Accountability. Proven Expertise.

HomeCleanse is the only remediation company structured around outcome-based financial accountability.

Money-Back Guarantee

If a treated area does not return to a normal indoor ecology, that specific area will be refunded.

10-Year Mold Recurrence Warranty

HomeCleanse stands behind its work with the only long-term warranty of its kind. No partial credit. No performance disclaimers. No fine-print loopholes. These guarantees are possible because HomeCleanse protocols are designed to resolve root causes rather than manage visible symptoms.

“Environmental correction is not separate from recovery. It is often essential to clinical progress.”
